

### Carbon Laser Facial Consent

I understand that erythema (redness) and edema (swelling) are common immediate reactions from the Carbon Laser Facial treatment process. These typically resolve within 2 weeks, but can last longer. There is a possibility of rare side effects such as blisters, hyper pigmentation, hypo pigmentation, infection, or scarring may occur. I may also feel a warming sensation of the skin during treatment. This is a temporary condition and I understand that each person's discomfort level may vary. \_\_\_\_\_  
(Clients Initial)

I understand that 1-3 treatments are required for the Carbon Laser Facial to be most effective. I understand that it is important to follow the recommended maintenance schedule for future treatments to keep the best possible results. I also realize that each individual's treatment response may be different; therefore, the number of treatments may vary to achieve desired results. \_\_\_\_\_

I understand sun exposure, tanning beds, sunless tanning lotions and tanning creams can cause discoloration or a reaction prior to or during the course of laser treatments. A broad spectrum (UVA/UVB) sunscreen SPF 30 or greater should be applied to the area(s) to be treated whenever exposed to the sun. \_\_\_\_\_
